Chart 1: NGRI Acquittee Hospital Admissions by Type – This chart depicts the number of individuals hospitalized due to new NGRI findings versus those who had their conditional release revoked or were voluntarily re-hospitalized following a period of time in the community.
Chart 2: NGRI Acquittee Hospital Discharge Type – This chart depicts the reasons NGRI acquittees may be discharged from the hospital. This may include the start of their initial conditional release, resumption of conditional release following a re-hospitalization, or release to the community without further legal conditions. The ‘other’ category includes discharges due to death or civil commitment.
Chart 3: Total NGRI Hospital Admissions and Discharges – This chart depicts the trends in total hospital admissions and discharges for NGRI acquittees.
Chart 4: Reasons for Termination of NGRI Conditional Release – This chart depicts the various conditions under which an NGRI acquittee’s conditional release ends. This may include revocation or re-hospitalization, a release from all legal conditions by the presiding court, or in some cases death of the acquittee.
Chart 5: NGRI Census Hospital vs. Community – This chart depicts the total census of NGRI acquittees in the hospital versus the total census of NGRI acquittees in the community on conditional release.
